

BEFORE**AFTER**

IN PARTNERSHIP WITH

DESCRIPTION

LaGrange High School, right off Interstate 210 in Lake Charles, LA, suffered severe damage to its property. The most severely damaged building was the auditorium that towered 45 ft above the first floor, which had its metal facade peeled off from high winds from hurricane Laura. This project was especially difficult due to the inaccessibility to this roof by any boom lift and the fact that 30% of the TPO roof structure was completely peeled off as well. After a day of preparation due to all the jagged edges from the peeled off metal, we were ready to dry-in the structure.

CASE STUDY

DESCRIPTION

StormWrappers responded to a roof fire at a large distribution center that was caused by a lightning strike. The fire caused extensive damage to the roof and metal roof decking. StormWrappers was charged with tearing off 130,000 sq ft of the charred roofing debris down to the deck and then installing TPO as a temporary roof.

PROJECT DETAILS

Client:	Mammoth
Event Type:	Fire
Building Type:	Warehouse
Square Footage:	128000
Scope:	Demo, TPO
